

Housing

Toward Universal Design

M800.01

Designers today face new pressures from government policies, demographic trends, public activism, and global competition. New pressures mean new responsibilities – and new opportunities – to meet the needs of a population diverse in age and ability. This video stimulates awareness and dialogue about how designers will meet these new responsibilities and opportunities. This video challenges every designer to face fundamental questions: who are we designing for – and how well?

Home Sweet Home: How To Help Older Adults

Live Independently

M800.05

Whether you live in a house, condominium or apartment, your home is a big part of your personal identity. It is a symbol of a special kind of independence. That's why most people want to remain in their homes as long as possible. In this video you'll see how minor adjustments and accommodations can make it possible for you – or someone you love – to remain independent at home. Learn from the experiences of one family, as its members deal with the difficulties older loved ones face living at home. See how doing the same things in new, easier ways can make a world of difference in anyone's ability to live more comfortably at home.

Fair Housing Means Universal Design

M800.11

This video is intended to create awareness for the Fair Housing Accessibility Guidelines contained in the 1988 Amendments to the Civil Rights Act of 1968. It is directed to all building and construction professionals (e.g. architects, interior designers, engineers, developers, contractors) and virtually anyone concerned with housing design. The Fair Housing Guidelines can be complicated, and may raise questions for those who are not acquainted with the many problems that people with disabilities have in their daily lives at home. The tape illustrates the value of the Guidelines, how small adjustments in design go a long way toward enhancing independence and how universal design helps make finished housing desirable to a wide audience. As awareness grows and the general population ages, those homes that are built as accessible now will become more valuable as time goes on.

The Way Home: Finding Your Place in the Golden Years

M800.13

Making a home, leaving home, homecoming...there may be many places we choose to call "home" in the course of our lives, but none of these choices may be as important, or as laden with anxiety, as the place we pick to live out our "golden years." This moving documentary introduces a variety of elders who are trying to find the best possible living situation for themselves or for their loved ones. Along the way we meet a doctor who still makes housecalls, in-home caregivers, and others who help to explain the complex and often confusing choices of medical care, legal counsel, and living facilities available. *The Way Home* explores the concerns, values, and options of seniors and their families who are looking for a place to call home.

Fire Safety for Older Adults

M800.15

Research conducted by the Home Safety Council shows that fire is the third leading cause of home injury and related death, and older adults are significantly more vulnerable if a home fire were to strike. Older adults are also twice as likely to suffer injuries or lose their lives in fires or falls than the overall population. This Fire Safety for Older Adults program includes program materials and a video to help teach older adults about fire safety. HSC encourages all family members and caregivers to inform individuals 65 years and older to prevent at home injuries during a fire.

A day in the life of Joe

M800.17

"A Day in the Life of Joe: The Impact of Design on the Older Person" is an interactive educational seminar offering a fresh perspective on design for the aging population. Jane Rohde, former IIDA Vice President of Forums, presents recent developments in designing for seniors, from residential and commercial design to healthcare and hospitality. This program addresses design, operations, regulations, and trends in the eldercare marketplace.
